My name is Joshua Jones, and I am a 2nd year student at the Institute of Technology NSCC. I am looking to apply to a remote position somewhere within your company and have decided to do it in a rather interesting way!

This position was auto applied to by a Selenium Python script I made. There are many positions within your company that look like they would make me quite happy. Because of this, and the fact that there was a lot, I wrote a script to auto apply to them for me.

This was not done blindly however, I sat in front as it was applying and intervened whenever necessary (such as when it tried to apply to a position that matched criteria but was still not relevant to what I wanted in a position.)

Regarding my skills, you may find links to both my website and publications within my indeed resume. I have extremely strong skills in IT, and as you can see, I am an excellent problem solver.

If you wish to see the project's source code: https://github.com/Ghostcrafter090/Indeed-Application-Bot

Hope to hear from you soon,

Joshua J
